

Rohit

Python Programmer

👤 Profile

I am a dynamic developer passionate about creating impactful applications. I have developed a Library Management System using Python, which has enhanced my problem-solving skills and ability to design efficient, user-friendly solutions. This project involved automating book rentals, user authentication, and fine calculations, improving overall library management. I'm eager to apply my technical expertise and creativity to tackle new challenges in the tech industry.

📁 Project-info

Library management system

- The Library Management System automates book rentals, user authentication, and fine calculations, improving efficiency and organization. It tracks book availability, manages user details, and promotes timely returns. The system enhances accessibility and transparency, offering a user-friendly experience for students and librarians. Future updates could include digital access and automated notifications.

🎓 Education

EEE, Ballari Institute of Technology and Management, Ballari

September 2022 — September 2026

I am currently pursuing a Bachelor of Technology in Electrical and Electronics Engineering (EEE) at Ballari Institute of Technology and Management (BITM), with an expected graduation in September 2026. My studies have provided a strong foundation in electrical circuits, power electronics, control systems, and renewable energy technologies, along with practical problem-solving skills gained through hands-on projects and teamwork.
